## LÍNGUA INGLESA – QUESTÕES DE 06 A 10

## **Mobile Phones**

1 When Scotsman Alexander Graham Bell invented the telephone in 2 1876, it was a revolution in communication. For the first time, people 3 could talk to each other over great distances almost as clearly as if they 4 were in the same room. Nowadays, though, we increasingly use Bell's 5 invention for emails, faxes and the internet rather than talking. Over the 6 last two decades a new means of spoken communication has emerged: 7 the mobile phone.

8 The first mobile telephone call was made in 1973 by Dr Martin Cooper, 9 the scientist who invented the modern mobile handset. As soon as his 10 invention was complete, he tested it by calling a rival scientist to announce his success. Within a decade, mobile phones became available 11 to the public. The streets of modern cities began to feature sharp-suited 12 13 characters shouting into giant plastic bricks. In Britain the mobile phone quickly became synonymous with the "yuppie," the new breed of young 14 15 urban professionals who carried the expensive handsets as status symbols. Around this time many of us swore that we would never, ever 16 17 own a mobile phone.

But in the mid-90s, something happened. Cheaper handsets and cheaper calling rates meant that, almost overnight, everyone had a mobile phone. And the giant plastic bricks of the 80s had evolved into smooth little objects that fitted nicely into pockets and bags. In every pub and restaurant you could hear the bleep and buzz of mobiles ringing and registering messages, occasionally breaking out into primitive versions of the latest pop songs. Cities suddenly had a new, postmodern birdsong.

Moreover, people's timekeeping changed. Younger readers will be amazed to know that, not long ago, people made spoken arrangements to meet at a certain place at a certain time. Once a time and place had been agreed, people met as agreed. Somewhere around the new millennium, this practice started to die out. Meeting times became approximate, subject to change at any moment under the new order of communication: the Short Message Service (SMS) or text message. Going to be late? Send a text message! It takes much less effort than arriving on time, and

6

33 it's much less awkward than explaining your lateness face-to-face. It's the 34 perfect communication method for the busy modern lifestyle. Like email 35 before it, the text message has altered the way we write in English, 36 bringing more abbreviations and a more relaxed approach to language 37 construction. The 160-character limit on text messages has led to a new, 38 abbreviated version of English for fast and instantaneous communication. 39 Traditional rules of grammar and spelling are much less important when you're sitting on the bus, hurriedly typing "Will B 15min late - C U @ the 40 41 bar. Sorry! :-)".

42 Mobile phones, the preserve of the once high-powered 43 businessperson and the "yuppie", are now a vital part of daily life for an 44 enormous amount of people. From schoolchildren to pensioners, every 45 section of society has found that it's easier to stay in touch when you've 46 got a mobile. Over the last few years mobiles have become more and 47 more advanced, with built-in cameras, global positioning devices and 48 internet access. And in the next couple of years, we can expect to see the arrival of the "third generation" of mobile phones: powerful micro-49 50 computers with broadband internet access, which will allow us to watch 51 TV, download internet files at high speed and send instant video clips to 52 friends.

Alexander Graham Bell would be amazed if he could see how far the
science of telephony has progressed in less than 150 years. If he were
around today, he might say: "That's gr8! But I'm v busy rite now. Will call
U 2nite."
